

# TAKE GA®series

TAKE GA-FS is a lightweight coated paper with excellent cost balance chosen for its printability, whiteness, and finely-detailed texture. This series of paper has been updated with the addition of TAKE GA BOARD-FS.

## 8 weights allowing a wide range of applications

The series allows a wide range of applications using everything from lightweight paper to heavy paper, enabling different weights in the same series to be combined for a pamphlet and its text pages, as well as for flyers, packages, and the covers of softback books.

## Easier color management

The new weights facilitate color management when creating packaging and advertising material in various forms. The availability of the same color in a large range of weights makes it easier to integrate the work of creatives in different fields, including graphic design and packaging design.

\* The final colors achieved may differ depending on printing ink and method.

**Combining different brands**

Light Brand A ≠ Heavy Brand B

(image)

Color adjustment is required when printing on light and heavy papers having different background colors.

**Standardizing on the TAKE GA series**

Light Heavy

(image)

Color adjustment is easier because the paper colors are the same and the texture is similar.

## Functionality and printability

The TAKE GA series of double-sided paper has thin coatings to provide reasonable printability. TAKE GA BOARD-FS has a 5-layered base paper structure to provide foldability.
